

Procion MX Color Mixing Chart

An unlimited color palette can be mixed with Procion MX fiber reactive dyes. Measured quantities of specific colors yield predictable new colors. These color formulas or recipes are suggestions for color. The variables of fiber type and processing, water purity, temperature and freshness of chemical assistants can dramatically vary the dyed results. Always run dye tests, observe and record results before any major dye run. The following color recipes are shown in two measurements—teaspoons and parts. The teaspoon measurements are for one pound of fiber. For convenience you can use the parts measurements to mix other quantities of dye. Reduce or expand the recipe proportionally to match the weight of the fiber.

Note: Small quantities of dye can be measured easily from a stock solution of 1 teaspoon of dye powder dissolved in 1/2 cup water. Use the following chart:

1 tsp. dry dye powder	=	1/2 cup (24 tsp.) stock solution
1/2 tsp. dry dye powder	=	1/4 cup stock solution
1/4 tsp. dry dye powder	=	6 tsp. stock solution
1/8 tsp. dry dye powder	=	3 tsp. stock solution
1/16 tsp. dry dye powder	=	1 1/2 tsp. stock solution
